

FS 110/120

COMPLETE FUEL SYSTEM & IN-TAKE CLEANER

FS 110 is a multi-functional fuel additive that can be used in three different applications:

FS 120 is a throttle body and in-take spray used especially for cleaning the throttle body valve and MAF sensor from gum, varnish and other contaminanants. It is especially effective when used in conjunction with the FS 110 fuel system cleaner. These two products will not void OEM warranty.

1) As a fuel system & injector service applied with a pressurized canister through fuel rail

- Allows for easy and complete cleaning of injectors and fuel system
- Applicable to all gasoline vehicles including trucks and passenger cars
- Restores fuel economy
- Lowers harmful exhaust gas

2) As an air in-take & combustion service applied with a vacuum applicator or pressurized spray nozzle

- A fast and efficient service to thoroughly clean and eliminate air in-take deposits
- Removes carbon build up from the combustion chamber and induction system
- Thoroughly cleans in-take and exhaust sensors
- Avoid costly tear-down of EGR valve

3) As an in-tank additive

- Cleans fouled injectors
- Corrects and maintains injector spray pattern
- Cleans in-take valves and removes combustion chamber deposits
- Improves fuel economy
- Will not harm oxygen sensor or catalytic converter
